Simonds International Brush Chipper Knives

Yields:

- **Reliability and Safety**
- **Longer Run Times**
- **More Production**

Long predictable run times are the hallmark of the Simonds International's American made brush chipper knives.

Our knives are engineered to meet the demanding requirements of **Tree Care Professionals**, with safety and reliability in mind.

Simonds International uses computerized induction annealing equipment to create a softened *anneal zone* around the mounting bolt holes. This *anneal zone* reduces brittleness and creates a tougher, safer knife in the strategic location where the bolt clamps the knife. We achieve this toughness while not sacrificing our harder, *edge holding* cutting edge. Our knives' body toughness, shock resistance and edge holding ability yield you extended life between re-sharpening and replacements.

- **Drum Chippers**
- **Disc Chippers**
- **Whole Tree Chippers**
- **Anvils**
- **Bed Knives**

Simonds International's American made knives combine the best of high quality raw materials, advanced manufacturing technologies and a long tradition of customer focused craftsmanship.

Double Edge Knives

Because maximum performance and run time are the essentials for success in today's competitive environment, we developed, designed and manufacture a brush chipper knife to stand up in the toughest of conditions.

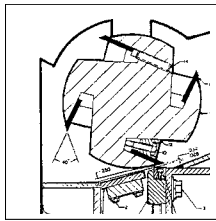

We engineer knives to meet or exceed OEM specifications. We use the latest automated manufacturing and heat treating technologies to produce the best knife money can buy. The results are a knife that puts less of a load on the internals of your chipper, netting you a cost savings on wear parts in the chipper.

The bottom line for you is longer life for your equipment.

Corrugated Back, Single Edge Knives, Anvils and Bed Knives

Simonds International has the knife you need and the delivery you require.

Simonds International and our network of authorized distributors maintain a full line of brush chipper knives, anvils and bed knives in stock to provide you with on-time delivery.

The drum chipper. At Simonds International, our double sided drum knives are ground on locating center pins to ensure the bevels are equal distance from the center of the holes.

Safety, performance and functionality are equally important in the field. Simonds International brush chipper knives have the quality and reliability you require to keep you chipping - instead of performing maintenance.

Are you ready for better performing knives?

Consider completing the contact information below and returning it to your Simonds International representative. We would like to meet with you and develop a customized knife review and proposal.

Simonds International knives fit these brands of machines . . . and more.
