

Quality, Accountability and Traceability

While we at Simonds work hard to be sure you receive only the highest quality narrow kerf bandsaw blades, we recognized that sometimes things do not go exactly as planned.

To help us learn from those times, identify root causes and implement corrective measures, Simonds prints all our Red Streak bandsaw blades with our internal manufacturing order number. Should you have an issue with your Red Streak blades, by communicating this number to us, we can identify when it was made, what machinery was used and what production lot of raw material was used. While we hope we don't need this number, it is your assurance that should something go wrong, we have the ability to investigate the how and why – and try to prevent it from happening again.

Red Streak® *The Right Blade for the Job!*

Simonds QC number is printed on the blade.
