

Quality, Accountability and Traceability

Our manufacturing Team in Fitchburg Massachusetts works hard to be sure you receive only the highest quality narrow kerf bandsaw blades. We recognized that sometimes things do not go exactly as planned. To help us learn from those times, identify root causes, and implement corrective measures, we laser etch all our PreSharp bandsaw blades with our internal manufacturing order number. Should you have an issue with your *PreSharp* blades, we can identify when it was made, what machinery was used and what production lot of raw material was used with this number. While we hope you don't need to share this number with us, it is your assurance that should something go wrong, we have the ability to investigate the how and why – and try to prevent it from happening again.

PreSharp – Square Face, Straight Cuts!

PreSharp QC number is laser etched on the blade
